

FoodieHub

Mini Project Presentation

- Smart food ordering and restaurant management system
- Customer-facing menu, cart, checkout, and tracking
- Owner dashboard for order and menu management

Introduction

What is FoodieHub?

- FoodieHub is a digital food ordering platform for restaurants and
- customers.
- Customers can browse dishes, filter menu items, and place orders
- quickly.
- Restaurant owners can manage orders, menu availability, and sales
- insights.

Problem Statement

- **Traditional ordering systems are often slow and inefficient.**
- **Restaurants need a faster way to manage orders and reduce wait times.**
- **Customers want a simple and user-friendly ordering experience.**

Objectives

- **Create a simple online food ordering website.**
- **Allow customers to search, filter, and order food.**
- **Provide order tracking and checkout flow.**
- **Enable restaurant owners to update order status.**

Key Features

- **Customer features:** menu browsing, sorting, s
- **tracking.**
- **Admin features:** login, dashboard, status upda
- **summary.**
- **Responsive UI** for desktop and mobile users.
- **Local cart storage** and token-based authentica

System Architecture

- Frontend communicates with backend through REST APIs
- Customer actions trigger order and menu APIs
- Admin dashboard fetches analytics, orders, and menu
- The system uses frontend logic and backend services
- operations.

Customer Flow

- **1. User opens the website and views the menu.**
- **2. Search and filter dishes with category or diet.**
- **3. Add desired dishes to the cart.**
- **4. Complete checkout and place the order.**
- **5. Track order status using the generated order.**

Owner Flow

- **1. Admin logs in to the owner dashboard.**
- **2. Reviews summary cards for total orders and**
- **3. Updates order status from pending to comp**
- **4. Manages menu availability and removes me**
- **5. Monitors customer activity and sales insigh**

Technologies Used

- **Frontend: HTML, CSS, JavaScript**
- **Backend: Node.js and Express.js**
- **Data handling: REST API and local storage**
- **Design: responsive and modern user interface**
- **Functionality: event-driven UI and order management**

Challenges and Learning

- **Managed cart updates and state changes efficiently**
- **Handled asynchronous API calls and dynamic rendering**
- **Built smooth admin controls for status and metadata**
- **Improved full-stack development, debugging, and testing**

Future Scope

- **Add online payment integration.**
- **Add secure signup and login management.**
- **Store data in MongoDB or another database.**
- **Introduce delivery tracking and notifications.**
- **Expand into a complete restaurant management system.**

Conclusion

- **FoodieHub is a practical mini project that combines frontend logic, and backend functionality.**
- **It demonstrates how digital ordering improves restaurant operations.**
- **helps restaurants manage operations efficiently.**
- **Thank You**
